## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136 (e). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Suyama in view of Linden et al

Suyama discloses a package comprising a die (2) having a plurality of bonding pads (2a-2c), a carrier (1) having a cavity (3), a plurality of dielectric layer (51-54), a conductive column (56b), at least a layer of conductive traces (56a)

Re claims 2, 11, See Fig 2.

Re claims 3, 12, a second conductive column (57b)(Fig 5b)

Re claims 4-5, 13, a pin grid array (6) or solder balls (col 6, lines 23-24)

Re claims 7, 15, see column 2, line 54.

Re claim 9, see Fig 2

Art Unit: 2831

The teaching of Suyama as discussed above does not disclose the carrier made of metal (re claims 1, 10) such as aluminum (re claim 6, 14).

Linden et al teach the use of aluminum carrier (22)(col 12, line 9) for enhancing thermal characteristic. It would have been obvious to one having ordinary skill in the art at the time the invention was made to use aluminum for the carrier of Suyama for the purpose of enhancing thermal characteristic.

The teaching of Suyama as discussed above does not disclose the dielectric layers made of polyimide, epoxy or PTFE (re claims 8, 16). It would have been obvious to one having ordinary skill in the art at the time the invention was made to use polyimide, epoxy or PTFE for the dielectric layers of Suyama, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. In re Leshin, 125 USPQ 416.
